B² conduit connectors

Conduit connector 90° for DIN EN conduit Ø 20 mm

- Toolless conduit connection to the B² one-gang junction boxes
- Accepts rigid and flexible conduits
- Damping of conduit vibrations during the compaction process
- Prevents the conduits penetrating the one-gang junction box and thus prevents conduits from being shortened later on
- Easy cable pull-in thanks to optimised 90° conduit elbow

Article no:	1262-20

The range of B2 conduit connectors offers a secure and toolless conduit connection to the B2 onegang junction boxes without the need for special tools. The conduit connection created using a conduit connector is absolutely impermeable to concrete and safely dampens the vibrations of the conduits during the compaction process. As the conduit connection is made outside the B2 onegang junction boxes, no conduit protrudes into the interior of the box, thus eliminating the need to shorten the conduit on the inside. With the new 90° conduit connectors, sideway conduit connections can now also be easily implemented in narrow installation areas.

- · Toolless conduit connection, no special tools required
- · Precisely fitting "variable" conduit connection, absolutely sealed against concrete
- · Damping of vibrations during the high-frequency or low-frequency compression process
- Conduit connection outside the one-gang junction box, no conduits protruding into the interior
- · Conduit connectors 90° for the lateral connection of conduits in narrow installation areas
